

**A CATALOGUE OF THE GENUS-GROUP *THERONIA*
(HYMENOPTERA: ICHNEUMONIDAE:
PIMPLINAE) FROM SUNDALAND**

ABSTRACT

To date, there are 14 species recorded from the genus-group *Theronia* in Sundaland. A total of eight species from the genus *Theronia* was recorded (*Theronia zebra zebra* Vollenhoven, *Theronia pseudozebra pseudozebra* Gupta, *Theronia maskeliiae schmiedeknechti* Krieger, *Theronia flava* Gupta, *Theronia lucida* Cameron, *Theronia nigrivertex* Gupta, *Theronia clathrata malayensis* Gupta, *Theronia clathrata javensis* Gupta) with three species only found in Java. One species from the genus *Parema* that is *Parema nigrobalteata callida* Tosquinet and three species from the genus *Nomosphecia* (*Nomosphecia zebroides zebroides* Krieger, *Nomosphecia pyramida pyramida* Gupta, *Nomosphecia scutellata scutellata* Gupta) were recorded. Genus *Augerella* and *Epitheronia* each has one species, *Augerella orientalis borneensis* Gupta and *Epitheronia tomeus* Gupta, respectively.

Key words: Sundaland, Ichneumonidae, Pimplinae, *Theronia*, *Parema*, *Epitheronia*, *Nomosphecia*, *Augerella*

ABSTRAK

Sehingga ke hari ini, terdapat 14 spesies dari kumpulan-genus *Theronia* telah direkodkan di Pulau-pulau Sunda. Lapan spesies adalah dari genus *Theronia* (*Theronia zebra zebra* Vollenhoven, *Theronia pseudozebra pseudozebra* Gupta, *Theronia maskeliiae schmiedeknechti* Krieger, *Theronia flava* Gupta, *Theronia lucida* Cameron, *Theronia nigrivertex* Gupta, *Theronia clathrata malayensis* Gupta, *Theronia clathrata javensis* Gupta) dengan tiga spesies daripadanya hanya terdapat di Jawa. Satu spesies adalah dari genus *Parema* iaitu *Parema nigrobalteata callida* Tosquinet dan tiga spesies lagi adalah dari genus *Nomosphecia* (*Nomosphecia zebroides zebroides* Krieger, *Nomosphecia pyramida pyramida* Gupta, *Nomosphecia scutellata scutellata* Gupta). Genus *Augerella* dan *Epitheronia* pula masing-masing terdapat satu spesies di bawahnya iaitu *Augerella orientalis borneensis* Gupta and *Epitheronia tomeus* Gupta.

Kata kunci: Pentas Sunda, Ichneumonidae, Pimplinae, *Theronia*, *Parema*, *Epitheronia*, *Nomosphecia*, *Augerella*

INTRODUCTION

Ichneumonidae comprises of 39 subfamilies and is one of the biggest families in Hymenoptera (Wahl and Sharkey, 1993). They are well distributed and highly diverse in almost all terrestrial habitats (La Salle & Gauld 1993). In tropical forests ichneumons can sometimes be seen on flowers, feeding on nectar or pollen, or resting on foliage whilst vibrating their white-banded antennae, but most often they are only glimpsed as they fly erratically amongst the understory vegetation (Gauld 1991). The ichneumonids play an important role as natural agent for stabilizing the insect pest population in any habitat as they parasitize the larvae of Lepidoptera, Coleoptera and Diptera (Gauld 1988; Wahl & Sharkey, 1993).

The subfamily Pimplinae is one of the largest groups in Ichneumonidae (Wahl & Sharkey, 1993). In Tropical areas, the Pimplinae are the second most abundant ichneumonids in terms

of its abundance and species diversity after the subfamily Cryptinae (unpublished data by Ng et al.). Townes (1969) had subdivided the subfamily into seven tribes namely Pimplini, Polysphinctini, Ephialtini, Theronini, Diacritini, Poemeniini and Rhyssini. However, in 1989 Eggleton recognized that the Pimplinae was a paraphyletic group of relatively primitive ichneumonids, and he attempted to split the group into holophyletic units by separating off several tribes and elevating them to the status of subfamilies. The principle changes and is used by Gauld during his work on the ichneumonidae of Costa Rica in 1991. Gauld (1991) broadly follows the classification of Eggleton (1989) with dividing the subfamily Pimplinae into three tribes; Ephialtini, Polysphinctini and Pimplini.

Theronia genus-group is under the tribe Pimplini and divided into six genera, namely the *Theronia*, *Parema*, *Nomosphecia*, *Augerella*, *Epitheronia* and *Neotheronia* (Gauld 1991). However, *Neotheronia* is not found in Sundaland, the area of South-East Asia that comprises the Malay Peninsula, Sumatra, Java, Bali, Borneo, Palawan and Balabac. *Neotheronia* is said to be found only in New World countries and it has not been found in the Asian region although it is said to inhabit tropical forest (Gauld 1991). Gupta did the last thorough revision and study on this genus in 1962 where he had studied the *Theronia* genus-group from Indo-Australian countries. From his study, Gupta was able to identify 92 species and subspecies with 33 new species and four new subgenera (*Parema*, *Nomosphecia*, *Augerella*, *Epitheronia*), which was then elevated by Gupta himself from subgenera to genera in 1967 (Gupta 1987). Gupta (1962) discovered that Sundaland was apparently the main center of distribution of the genus-group. The Indian and other Asiatic forms were apparently derived from Sundaland (Gupta 1962). Gupta (1962) had also recognized 14 species from five genera of the genus-group *Theronia* in Sundaland.

The genus-group *Theronia* differs from the rest of the tribe by having one or more sharp carinae on the propodeum, a polished abdomen with generally indistinct swellings, large tarsal claws with an enlarged hair at the base which is flattened at its tip, and by having the nervellus broken well above the middle (Gupta

1962). The genus-group *Theronia* inhabit mostly dense forests. Some of them fly close to the ground, but others commonly fly up to waist or shoulder height if there is undergrowth at those levels. Nearly all are pale coloured, usually pale yellow to ferruginous, and frequently banded with blackish. In flight they make a conspicuous pale streak through the dark forest (Townes and Townes 1960).

MATERIALS AND METHODS

This catalogue listed the genera and species of the genus-group *Theronia* that were recorded and described from Sundaland. Below is the list of the Museums that the specimens are located and deposited. In the text the location is indicated by the name of the place, abbreviation or name of the owner for personal collections.

BMNH	British Museum (Natural History), Cromwell Road, London, England.
Bogor	Bogor Museum, Bogor, Java.
Gupta	Personal Collection S.N., and V.K. Gupta
Leiden	Rijksmuseum van Natuurlijke Histoire, Leiden, The Netherlands.
Ottawa	Canadian National Collection, Department of Agriculture, Ottawa, Canada.
Townes	Collection of Henry and Marjorie Townes, Ann Arbor, Michigan, U.S.A.
USNM	U.S. National Museum, Washington 25, D.C., U.S.A
ZMB	Zoologischen Museum der Humboldt-Universität, Invalidenstrasse, Berlin N. 4, East Germany

RESULTS AND DISCUSSION

There are 14 species of the group-genus *Theronia* from Sundaland (Gupta 1962). Eight species are from the genus *Theronia*, three species from the genus *Nomosphecia* and one species from the genera *Parema*, *Augerella* and *Epitheronia* respectively.

Out of the 14 species discovered by Gupta in 1962, five species are well distributed throughout Sundaland. The five species are *Theronia zebra zebra* Vollenhoven, *Theronia pseudozebra pseudozebra* Gupta, *Parema nigralteata callida* Tosquinet, *Nomosphecia zebroides zebroides* Krieger and *Epitheronia tomeus* Gupta. There are two species that can only be found in the island of Java which are *Theronia flava* Gupta and *Theronia flava* Gupta and there are only three species from the genus-group *Theronia* was found so far in the Malay Peninsular. The three species are *Theronia nigrivertex* Gupta, *Theronia clathrata malayensis* Gupta and *Nomosphecia pyramida pyramida* Gupta. On the other hand, *Theronia maskeliya schmiedeknechti* Krieger was only found in the Java and Sumatera island of Indonesia. There is one species named *Augerella orientalis borneensis* Gupta and it is named borneensis most probably because it was only found in North Borneo and not elsewhere.

Table 1. List of the recorded genera, species and locality of the genus-group *Theronia*

Genus	Species	Locality
<i>Theronia</i>	<i>Theronia zebra zebra</i> Vollenhoven	Malay Peninsular; Java; Singapore; North Borneo
	<i>Theronia pseudozebra</i> <i>pseudozebra</i> Gupta	North Borneo; Malay Peninsular; Java
	<i>Theronia maskeliya</i> <i>schmiedeknechti</i> Krieger	Sumatra; Java
	<i>Theronia flava</i> Gupta	Java
	<i>Theronia lucida</i> Cameron	Borneo
	<i>Theronia nigrivertex</i> Gupta	Malay Peninsular
	<i>Theronia clathrata</i> <i>malayensis</i> Gupta	Malay Peninsular

	<i>Theronia clathrata javensis</i> Gupta	Java
<i>Parema</i>	<i>Parema nigralalteata callida</i> Tosquinet	Malaya; Singapore; Sumatra; Borneo; Java
<i>Nomosphecia</i>	<i>Nomosphecia zebroides zebroides</i> Krieger <i>Nomosphecia pyramida pyramida</i> Gupta <i>Nomosphecia scutellata scutellata</i> Gupta	Malaya; Java; Sumatra; Sarawak; Bangka Malay Peninsular
<i>Augerella</i>	<i>Augerella orientalis borneensis</i> Gupta	Singapore; North Borneo
<i>Epitheronia</i>	<i>Epitheronia tomeus</i> Gupta	North Borneo
		East Borneo; North Borneo; Singapore; Malay Peninsular

SYSTEMATIC ACCOUNTS

Genus: *Theronia* Holmgren

Theronia zebra zebra Vollenhoven
